# SEARCH REQUEST FORM

Scientific and Technical Information Center

Requester's Full Name: \_\_\_\_\_ Examiner #: \_\_\_\_\_ Date: \_\_\_\_\_  
Art Unit: \_\_\_\_\_ Phone Number 30 \_\_\_\_\_ Serial Number: \_\_\_\_\_  
Mail Box and Bldg/Room Location: \_\_\_\_\_ Results Format Preferred (circle): PAPER DISK E-MAIL

If more than one search is submitted, please prioritize searches in order of need.

\*\*\*\*\*

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc, if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

Title of Invention: \_\_\_\_\_

Inventors (please provide full names): \_\_\_\_\_

Earliest Priority Filing Date: \_\_\_\_\_

*\*For Sequence Searches Only\* Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.*

CC AAR9891-920 comprise at least one immunologically active region of  
CC hepatitis C virus (HCV), selected from amino acid sequences 384-414,  
CC 1738-1759, 2217-2236, 2402-2419 and 2345-2357. The peptides are  
CC used in a claimed method for typing antibodies in a 11q. sample.  
CC Assays performed using the peptides as antigens, which corresp. to  
CC regions of high immunogenicity and variability, can be performed  
CC routinely using simple equipment to provide accurate HCV typing.  
CC AAR9901-06 are derived from amino acids 1738-1759 of the NS4-region  
CC of HCV.

 DR New inhibitors of fibrillogenesis proteins or peptides - used for  
 XX preventing, treating or detecting amyloidosis disorders such as  
 PT Alzheimer's disease.  
 PT Claim 15; Page 40; 63pp: English.  
 PS A method has been developed for the prevention or treatment of a  
 XX disorder or disease associated with the formation of amyloid or  
 CC amyloid-like deposits, involving the abnormal folding of a protein  
 CC or peptide. The method involves administering an inhibitory peptide  
 CC which prevents the abnormal folding or which dissolves existing amyloid  
 CC or amyloid-like deposits, where the peptide comprises a sequence of  
 CC 3-15 amino acid residues and has a hydrophobic cluster of at least 3  
 CC amino acids, where at least one of the 3 amino acids is a beta-sheet  
 CC blocking amino acid residue selected from Pro, Gly, Asn and His. The  
 CC present sequence represents a specifically claimed example of an anti-  
 CC prion peptide which inhibits abnormal protein folding. The inhibitory  
 CC peptide is capable of associating with a structural determinant on the  
 CC protein or peptide to structurally block and inhibit the abnormal  
 CC folding into amyloid or amyloid-like deposits. The method can be used  
 CC for preventing, treating or detecting e.g. Alzheimer's dementia or  
 CC diseases, Down's syndrome, other amyloidosis disorders, human prion  
 CC diseases such as Kuru, Creutzfeldt-Jakob disease, Gerstmann-Strausler-  
 CC Scheinker Syndrome, prion associated human neurodegenerative diseases or  
 CC animal prion diseases such as scrapie, spongiform encephalopathy,  
 CC transmissible mink encephalopathy and chronic wasting disease of mule  
 CC deer and elk.

XX Diagnosing breast cancer by detecting a breast cancer-associated  
PT protein - allows early and reliable diagnosis and treatment  
PT monitoring, and antibody or inhibitory compounds useful for treating  
PT breast cancer

PS Claim 6; Page 29; 47pp; English.

XX The present sequence represents a breast cancer-associated protein  
CC fragment for use in a method for diagnosing breast cancer in tissue  
CC or body fluid by detecting one or more breast cancer-associated  
CC protein(s). Alternatively a nucleic acid encoding a breast cancer-  
CC associated protein is detected in the sample by the use of a nucleic  
CC acid probe. The breast cancer-associated proteins, encoding nucleic  
CC acids and antibodies are useful in diagnostic assays and kits for  
CC breast cancer detection. The proteins are also useful in screening for  
CC inhibitory compounds and monitoring effectiveness of treatments. The  
CC antibody, or pharmaceutical compositions containing the antibody or  
CC the inhibitory compound, can be administered to patients to treat  
CC breast cancer. The methods allow reliable and early diagnosis of  
CC breast cancer, or prediction of its onset, by detection of specific  
CC markers expressed in breast tumour cells but not in non-cancerous  
CC breast cells.

PT New inhibitors of fibrillogenesis proteins or peptides - used for
PT preventing, treating or detecting amyloidosis disorders such as
PT Alzheimer's disease.
XX
PS
XX Claim 15; Page 40; 63pp; English.
XX
CC A method has been developed for the prevention or treatment of a
CC disorder or disease associated with the formation of amyloid or
CC amyloid-like deposits, involving the abnormal folding of a protein
CC or peptide. The method involves administering an inhibitory peptide
CC which prevents the abnormal folding or which dissolves existing amyloid
CC or amyloid-like deposits, where the peptide comprises a sequence of
CC 3-15 amino acid residues and has a hydrophobic cluster of at least 3
CC amino acids, where at least one of the 3 amino acids is a beta-sheet
CC blocking amino acid residue selected from Pro, Gly, Asn and His. The
CC present sequence represents a specifically claimed example of an anti-
CC prion peptide which inhibits abnormal protein folding. The inhibitory
CC peptide is capable of associating with a structural determinant on the
CC protein or peptide to structurally block and inhibit the abnormal
CC folding into amyloid or amyloid-like deposits. The method can be used
CC for preventing, treating or detecting e.g. Alzheimer's dementia or
CC disease, Down's syndrome, other amyloidosis disorders, human prion
CC diseases such as Kuru, Creutzfeldt-Jakob disease, Gerstmann-Strausler-
CC Scheinker Syndrome, prion associated human neurodegenerative diseases or
CC animal prion diseases such as scrapie, spongiform encephalopathy,
CC transmissible mink encephalopathy and chronic wasting disease of mule
CC deer and elk.

PT Human apoptosis associated protein Bdk - useful to treat
PT degenerative disorders characterised by inappropriate cell death or
PT proliferation
XX
PS
XX Example 8; Fig 9B; 110pp; English.
XX
CC This peptide comprises alanine scanning mutant PW-LVLEE of the BH3
CC domain (see AAW38346) of human Bdk (see AAW38358), a novel apoptosis
CC associated protein that can induce apoptosis in cells. PW-LVLEE
CC contains 5 alanine substitutions in the BH3 element. It has
CC completely lost BH3's apoptosis induction capabilities, supporting
CC the conclusion that the BH3 region is absolutely necessary for
CC Bdk's apoptotic function. Bdk and its BH3 domain can be used to
CC treat degenerative disorders characterised by inappropriate cell
CC death or proliferation.

 PS Claim 22; Page 40; 57pp; English.  
 XX  
 CC The present invention describes synthetic peptides having an amino acid  
 CC sequence comprising at least 3 residues selected from the group of amino

CC acids consisting of aromatic acids, negatively charged amino acids,  
CC positively charged amino acids, and aliphatic amino acids, the synthetic  
CC peptides being at least 7 amino acid residues in length and capable of  
CC binding to a major histocompatibility complex (MHC) class II protein  
CC associated with an autoimmune disease. The synthetic peptides have  
CC anti-inflammatory and anti-arthritis activities. They are used to treat  
CC inflammatory and demyelinating autoimmune diseases, especially  
CC rheumatoid arthritis and multiple sclerosis. The peptides are specific  
CC for particular MHC Class II alleles. Purified, short and synthetic  
CC peptides should have fewer side effects than mixtures of random  
CC peptides; may include many repeats of the active sequence and/or contain  
CC amino acid analogues that improve stability (or other desired features).  
CC AAY82021 to AAY82044 represent specifically claimed peptide sequences  
CC which can be used as part of the synthetic peptides of the present  
CC invention; AAY82045 to AAY82063 represent specifically claimed examples

Title: US-09-351-296-15

Sequence: 1 QATROADIPQIPAIQSSWPKLEQ 22

Scoring table: OLIGO  
Gapop 60.0 , Gapext 60.0

Searched: 93435 seqs, 34255486 residues

Word size : 0

Total number of hits satisfying chosen parameters: 1176

Minimum DB seq length: 6

Maximum DB seq length: 22

Post-processing: Listing first 45 summaries

Database : SwissProt\_39:\*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

PT Adherence factors of non-pathogenic microorganisms - useful for  
 screening for microorganisms and as food additives

XX Claim 6; Page 29; 49pp; English.

CC A novel claimed protein (A) from a non-pathogenic microorganism  
 CC has mucosa binding promoting (MBP) activity and is characterised  
 CC as including peptide motifs at least 80% similar, and preferably  
 CC more than 90% similar, to the peptide sequences I-V given in  
 CC AAW15794-98, especially to peptides II-V. (A) preferably also  
 CC includes a conserved consensus motif (see AAW26577) and one or both  
 CC of 2 claimed consensus sequences (see AAW15792 and AAW15793). Such  
 CC adherence factors, e.g. 104R adherence factor of *Lactobacillus*  
 CC fermentum (see AAW15799), can be used for prophylaxis and/or treatment  
 CC of disease or illness associated with a mucosa-colonising pathogens.  
 CC The part expressing MBP activity is useful as a targeting  
 CC component for an additional pharmaceutical component physically  
 CC linked to the targeting component. Compositions comprising the  
 CC adherence factors are useful for improving food products.  
 CC detection of the genes or proteins is useful for screening for  
 CC non-pathogenic microorganisms.

PT Synthetic peptide inhibitors of Ras-GAP interaction - as  
 PT antitumour agents against e.g. colorectal carcinoma, exocrine  
 PT pancreatic carcinoma and myeloid leukaemia

XX Disclosure; Page 11; 31pp; English.

CC The peptide corresponds to the prod. of the Harvey ras oncogene  
 CC from residues 126-137. The peptide is used as a negative control in  
 CC the study of peptides which bind to GRPase activating protein (GAP)  
 CC thus inhibiting Ras activation by GAP and inhibiting Ras-dependent  
 CC cell transformation. Oncogenic forms of Ras occur in various human  
 CC cancers, e.g. colorectal carcinoma, exocrine pancreatic carcinoma  
 CC and myeloid leukaemias. Ras complexed with GTP can bind GAP and  
 CC this is thought to be the important step in the transformation  
 CC activity of Ras. See also AAR25602-28.

XX Substrate subtraction phage display peptide libraries - used to  
PT distinguish between active and latent forms of enzyme, e.g. serine  
PT protease

PS Claim 25; Page 88; 138pp; English.

XX The present sequence represents an enzyme inhibitor peptide used in

CC the method of the invention to distinguish between t-PA and u-PA. The  
CC present invention describes a substrate subtraction library for the  
CC identification of peptide substrates selective between a first enzyme  
CC (E1) and a second enzyme (E2), comprising a collection different  
CC peptides, substantially lacking peptides that are effective substrates  
CC for E1. Also described are: (1) a method (M1) for identifying peptide  
CC substrates selective between a first enzyme (E1) and a second enzyme  
CC (E2); (2) a compound comprising the amino acid sequence of a peptide  
CC identified by M1; (3) a polypeptide for use as an enzyme inhibitor  
CC comprising one of 237 amino acid sequences (see AAW56801 to AAW5947,  
CC and AAW56949 to AAW57038); (4) a recombinant DNA vector comprising DNA  
CC (1) encoding a protease inhibitor including the sequence identified by  
CC the M1; (5) a prokaryotic or eukaryotic cell containing the vector of  
CC (4); (6) an antibody (Ab) immunoreactive with at least one of the  
CC peptides identified by M1; and (7) a diagnostic assay for distinguishing  
CC between active and latent forms of protease inhibitors, that uses (Ab).  
CC The library and method are used for distinguishing between active and  
CC latent forms of enzyme inhibitors, e.g. proteases, kinases and  
CC phosphatases. (Ab) are used for affinity purification of recombinant  
CC peptides and in the identification of naturally occurring protease  
CC inhibitors. Enzyme-inhibiting peptides identified can be used to treat a  
CC serpin deficiency or a disorder of serine proteases.

Peptides containing epitopes of human immune deficiency virus Tat protein - used to induce antibodies reacting with HIV-1 Tat proteins, used to, e.g. reduce HIV-1 levels in both infected and uninfected patients

Claim 5; Page 119; 140pp; English.

This sequence represents an epitope of the HIV Tat protein.

The invention relates to a composition containing a peptide of formulae

(I)-(IV): R1-VPD-Y-LEP-R2 (I); R3-K-X-IGISYGRK-R4 (II);

R5-RR-x'zay'-S-R6 (III); R7-SQ-x''-HQ-y''-SHSKOP-R8 (IV); where:

y = R, K, S, N or ornithine; R1, R3, R5 and R7 = hydrogen, lower alkyl or

alkanoyl, or 1-5 (for R1 and R3) or 1-3 (for R5 and R7) amino acids (aa),

optionally substituted by lower alkyl or alkanoyl; R2 = free hydroxy,

amide or 1-14 additional aa, optionally substituted by lower alkyl or

alkanoyl; x = G or A; R4 = hydroxy, amide or 1-5 additional aa,

optionally substituted by amide; x' = A, P, S or Q; y' = D, N, G or S;

z = P or H; a = Q or P; R6 = hydroxy or amide; x'' = N or T;

y'' = A or V, and R8 = hydroxy, amide or 1-3 additional aa, optionally

substituted by amide. The compositions, and synthetic molecules, viruses,

or bacteria containing them, are used to induce Ab that react with over

95, best 99, % of known human immunodeficiency virus (HIV)-1 Tat

proteins, particularly to reduce HIV-1 levels in both infected and

uninfected subjects (provided they are still immunocompetent). Antibodies

(Ab) against the peptides reduce viral multiplication during initial

infection and minimise the chronic viraemia that leads to acquired immune

deficiency syndrome. Ab are used to reduce HIV-1 levels in infected

subjects unable to mount an immune response (passive immunisation).

Peptides (I)-(IV) represent four different epitopes in Tat protein and a

relatively small number of them will induce antibodies cross-reactive

with most strains and variants of Tat. The content of the composition is

easily adjusted to account for and new strains discovered. They can be

administered in the early stages of, or before, infection and do not

promote selection of escape mutants.

XX Humanised antibody comprising - CDR region of mouse MAB B-B10

PT specific for IL-2 receptor useful for treating carcinoma

XX  
PS Claim 1; Page 43; 62pp; English.  
XX  
CC The sequences given in AAR37599-604 represent the complementarity-  
CC determining regions (CDRs) of a humanised antibody (Ab) which binds  
CC specifically to human interleukin (IL)-2 receptor (hIL2R). These  
CC CDRs were derived from the murine anti-human IL-2 receptor monoclonal  
CC Ab (Mab) B-B10 (see also AA043242-43). This Mab is antagonistic to the  
CC binding of IL-2 to the IL-2 receptor on human T-cells. It also  
CC inhibits the human mixed lymphocyte reaction. The cDNA encoding the  
CC variable (V) region of the B-B10 Ab was cloned by PCR and sequenced  
CC (see also AA043226-32 and AA043233-36). A human Ab with high levels of  
CC amino acid sequence homology to the murine sequence was selected and  
CC the framework of this Ab was bound with the B-B10 V region CDR and a  
CC part of the framework to design several kinds of the humanised B-B10 V  
CC region (see also AA043244-45). The DNA sequence coding this humanised  
CC B-B10 was synthesised and a plasmid expressing humanised B-B10 was  
CC constructed.

XX HIV gp160 epitope(s) immunologically homologous to HLA - used to

PT develop agents for immuno-diagnosis and vaccines for HIV

XX infection

XX Claim 9; Page 14; 31pp; English.

XX The patent claims epitopes of the HIV gp160 protein which are

CC immunologically homologous to at least one epitope of the HLA

CC protein family, preferably the HLA class I protein heavy chains.

CC The present sequence is a region of the heavy chain alpha-1 domain,

CC cw4 allele, to which the epitopes are homologous.

CC The identification of HIV gp160 epitopes homologous to HLA epitopes  
CC can be used to develop agents for vaccines and immunodiagnosis of  
CC HIV infection. The HIV homologous HLA regions are able to induce  
CC anti-HLA autoantibodies and act as superantigens during the  
CC infection course, leading to a gradual and selective loss of  
CC certain T receptor families.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

PT Antibody typing by sequential reaction with immobilised antigens -  
 esp. using new hepatitis C virus peptide(s) as antigens

PS Claim 9; Page 15; 22pp; German.

CC AAR9891-920 comprise at least one immunologically active region of  
 hepatitis C virus (HCV), selected from amino acid sequences 384-414,  
 1738-1759, 2217-2236, 2402-2419 and 2345-2357. The peptides are  
 used in a claimed method for typing antibodies in a 11q sample.  
 CC Assays performed using the peptides as antigens, which corresp. to  
 regions of high immunogenicity and variability, can be performed  
 CC routinely using simple equipment to provide accurate HCV typing.  
 CC AAR9901-06 are derived from amino acids 1738-1759 of the NS4-region  
 of HCV.

 PT New Transforming Growth Factor mimicking peptides - useful for  
 PT tissue repair and immune modulation in humans and animals  
 XX  
 PS Claims 5,7,8; Page 17; 23pp; English.  
 XX  
 CC The patent discloses (A) 14 new synthetic peptides derived from  
 CC Transforming Growth Factor-beta (TGF-beta) which mimic TFG-beta  
 CC activity; and (B) a pharmaceutical composition comprising TGF-beta-1  
 CC and at least one of 16 defined synthetic peptides derived from TFG-beta  
 CC which mimics its activity. Five of the 14 new peptides are amongst the  
 CC 16 peptides used in the TGF-beta-1 composition. The novel peptides are  
 CC agonists of TGF-beta, and the peptides in the TGF-beta-1 composition  
 CC act as synergists for the TGF-beta-1. (A) and (B) are useful for  
 CC treating immune or inflammatory disorders, e.g. allograft rejection,  
 CC septic shock, adult respiratory disease syndrome (ARDS), autoimmune  
 CC disease, rheumatoid arthritis, systemic lupus erythematosus (SLE) or  
 CC inflammatory bowel disease. They can also be used in wound healing  
 CC and as immunogens to elicit antibodies.  
 CC The present sequence represents one of the peptides which can be used as  
 CC a synergist in the TGF-beta-1 composition.

 PT New isolated hydrophobic protein antigens derived from the cell walls  
 PT of Candida albicans and their corresponding antibodies, useful for  
 PT detecting and treating yeast infection  
 XX  
 PS Disclosure; Page 12; 62pp; English.  
 XX  
 CC AAB08241-50 represent peptides which are derived from a 40 kDa cell  
 CC wall protein of Candida albicans. The peptides have been identified  
 CC by mass spectroscopy analysis. The cell wall peptides and their  
 CC corresponding antibodies are useful for treating yeast infections in a  
 CC patient, as well as for preventing or detecting infection of any yeast  
 CC type. These include opportunistic and nosocomial infections. The  
 CC peptides are also useful in the development of peptidomimetics and/or  
 CC small organic molecules with therapeutic, diagnostic and/or research  
 CC use. The antibodies are effective inhibitors of hydrophobically mediated  
 CC pathogenesis events. They are also useful in diagnostic tests  
 CC (i.e. detect, diagnose and serotype yeast infection), and for detecting  
 CC the presence of Candida and other pathogenic yeasts, in a biological  
 CC sample. Furthermore, they may be used as research and development tools.

XX Peptides that antagonize binding of transforming growth factor beta1,  
PT useful for treatment of liver disease, especially cirrhosis, are  
PT partial sequences of the factor or its receptors  
PS Disclosure; Page 23; 86pp; Spanish.  
XX  
XX The invention relates to synthetic peptides that antagonise the binding  
CC of transforming growth (TGF) factor beta1 (TGF-b1) to its receptor  
CC in vivo which have partial amino acid sequences identical, or similar,  
CC with those of TGF-b1 and/or its receptors. Peptides AAY92945-V93133  
CC represent examples of the peptides of the invention. The peptides act  
CC by competitive inhibition of the binding of TGF-b1 to its receptors,  
CC e.g. they are inhibitors of stimulation of collagen synthesis in liver  
CC cells and inhibitors of synthesis of proteolytic enzymes able to degrade  
CC the extracellular matrix. The peptides, their mimetopes and/or DNA (or  
CC expression systems) encoding the peptides are used for treatment of  
CC liver disease, specifically cirrhosis.

PT factor-beta - used to induce chemotaxis and proliferation of  
PT fibroblasts and inflammatory cells, partic. for wound healing  
XX  
XX Claim 4; Column 7; 28pp; English.  
PS  
XX The sequences given in AAR79188-207 are chemotactic peptides derived  
CC from four overlapping regions of transforming growth factor (TGF)-beta  
CC isoforms 1-5. These peptide correspond to the regions 368-374, 364-378,  
CC 366-387 and 358-382 from the carboxy terminal portion of the TGF-beta  
CC isoforms. The numbering of the positions of the peptides is based on  
CC TGF-beta1. These peptides possess chemotactic properties for  
CC fibroblasts and inflammatory cells, including neutrophils and  
CC monocytes/macrophages. They also stimulate fibroblast proliferation  
CC and collagen synthesis. They are partic. used to promote wound  
CC healing.

(SEYE/) SEYER J.

Kang A, Postlethwaite AE, Seyer J;

WPI; 1998-582597/49.

Chemotactic peptide(s) for e.g. wound healing - corresponding to

fragments of transforming growth factor beta isoforms

Disclosure; Column 3; 34pp; English.

The invention relates to chemotactic peptides which are used for inducing

chemotaxis of fibroblasts and/or inflammatory cells in vitro or in vivo;

for inducing proliferation of fibroblasts and/or inflammatory cells in

vitro or in vivo; for inducing collagen synthesis by fibroblasts in vitro

or in vivo; and for promoting wound healing. The present sequence

represents a chemotactic peptide disclosed in the specification.

 PS Claim 5; Page 51; 88pp; English.  
 XX  
 CC The sequences given in AAW21201-560 represent hydrophilic signal oligo-  
 CC peptides. These signal oligopeptides are localised on the surface  
 CC of the protein and are represented by the hydrophilicity maxima of  
 CC the protein. These peptides are enriched in charged amino acids  
 CC arranged with neutral spacer amino acids. The specific signal  
 CC character of these oligopeptides is determined by a characteristic  
 CC combination of conformation and charge within the signal sequence.  
 CC These oligopeptides may be used as vaccines in the treatment of  
 CC human disease, as competitive inhibitors to prevent or reduce the  
 CC metabolic action or interaction of a selected protein by blocking  
 CC its specific signal sequences, or as therapeutic agents to function  
 CC as feedback regulators to reduce synthesis rate of a selected protein.  
 CC These peptides may be modified by omitting one or more amino acids at  
 CC the N- and/or C-terminal, by substituting one or more amino acids  
 CC without consideration of charge and polarity, by substituting one or  
 CC more amino acids with amino acid residues with similar charge and/or  
 CC polarity, by omitting one or more amino acids or a combination of these.

XX Anti:sense peptide(s) which alter the activities of target  
PT cytokine(s) - used to treat inflammatory conditions e.g. rheumatoid  
PT arthritis or cancer  
XX

PS Claim 10; Page 29; 41pp; English.

XX  
CC AA05812-W05819 represent antisense peptides of the invention. Antisense  
CC peptides are encoded by antisense DNA. The antisense peptides are the  
CC hydrophobic complement of the peptides encoded by the sense DNA strand.  
CC Antisense peptides exert an antagonistic effect on target ligands by  
CC virtue of their ability to bind to the sense peptide sequences, and  
CC thereby competing with the normal binding ligands for the peptide. These  
CC sequences are antisense to a target polypeptide, and when bound to their  
CC targets, alter the biological activity of the target polypeptide or the  
CC activity of a target molecule containing the peptide. AA05814-W05816  
CC are antisense to a sequence contained within tumour necrosis factor  
CC alpha (TNFalpha). These sequences are used to treat or prevent  
CC conditions mediated by cytokines, preferably cancer or inflammatory  
CC conditions, especially rheumatoid arthritis or septic shock.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

 DR New inhibitors of fibrillogenesis proteins or peptides - used for  
 XX preventing, treating or detecting amyloidosis disorders such as  
 PT Alzheimer's disease.  
 PS Claim 15; Page 40; 63pp; English.  
 XX A method has been developed for the prevention or treatment of a  
 CC disorder or disease associated with the formation of amyloid or  
 CC amyloid-like deposits, involving the abnormal folding of a protein  
 CC or peptide. The method involves administering an inhibitory peptide  
 CC which prevents the abnormal folding or which dissolves existing amyloid  
 CC or amyloid-like deposits, where the peptide comprises a sequence of  
 CC 3-15 amino acid residues and has a hydrophobic cluster of at least 3  
 CC amino acids, where at least one of the 3 amino acids is a beta-sheet  
 CC blocking amino acid residue selected from Pro, Gly, Asn and His. The  
 CC present sequence represents a specifically claimed example of an anti-  
 CC prion peptide which inhibits abnormal protein folding. The inhibitory  
 CC peptide is capable of associating with a structural determinant on the  
 CC protein or peptide to structurally block and inhibit the abnormal  
 CC folding into amyloid or amyloid-like deposits. The method can be used  
 CC for preventing, treating or detecting e.g. Alzheimer's dementia or  
 CC disease, Down's syndrome, other amyloidosis disorders, human prion  
 CC diseases such as Kuru, Creutzfeldt-Jakob disease, Gerstmann-Strausler-  
 CC Scheinker Syndrome, prion associated human neurodegenerative diseases or  
 CC animal prion diseases such as scrapie, spongiform encephalopathy,  
 CC transmissible mink encephalopathy and chronic wasting disease of mule  
 CC deer and elk.

PT Diagnosing breast cancer by detecting a breast cancer-associated  
PT protein - allows early and reliable diagnosis and treatment  
PT monitoring, and antibody or inhibitory compounds useful for treating  
PT breast cancer

PS Claim 6; Page 29; 47pp; English.

XX The present sequence represents a breast cancer-associated protein  
CC fragment for use in a method for diagnosing breast cancer in tissue  
CC or body fluid by detecting one or more breast cancer-associated  
CC protein(s). Alternatively a nucleic acid encoding a breast cancer-  
CC associated protein is detected in the sample by the use of a nucleic  
CC acid probe. The breast cancer-associated proteins, encoding nucleic  
CC acids and antibodies are useful in diagnostic assays and kits for  
CC breast cancer detection. The proteins are also useful in screening for  
CC inhibitory compounds and monitoring effectiveness of treatments. The  
CC antibody, or pharmaceutical compositions containing the antibody or  
CC the inhibitory compound, can be administered to patients to treat  
CC breast cancer. The methods allow reliable and early diagnosis of  
CC breast cancer, or prediction of its onset, by detection of specific  
CC markers expressed in breast tumour cells but not in non-cancerous  
CC breast cells.

PT preventing, treating or detecting amyloidosis disorders such as  
PT Alzheimer's disease.  
XX  
PS Claim 15; Page 40; 63pp; English.  
PS  
XX A method has been developed for the prevention or treatment of a  
XX disorder or disease associated with the formation of amyloid or  
XX amyloid-like deposits, involving the abnormal folding of a protein  
XX or peptide. The method involves administering an inhibitory peptide  
XX which prevents the abnormal folding or which dissolves existing amyloid  
XX or amyloid-like deposits, where the peptide comprises a sequence of  
XX 3-15 amino acid residues and has a hydrophobic cluster of at least 3  
XX amino acids, where at least one of the 3 amino acids is a beta-sheet  
XX blocking amino acid residue selected from Pro, Gly, Asn and His. The  
XX present sequence represents a specifically claimed example of an anti-  
XX prion peptide which inhibits abnormal protein folding. The inhibitory  
XX peptide is capable of associating with a structural determinant on the  
XX protein or peptide to structurally block and inhibit the abnormal  
XX folding into amyloid or amyloid-like deposits. The method can be used  
XX for preventing, treating or detecting e.g. Alzheimer's dementia or  
XX disease, Down's syndrome, other amyloidosis disorders, human prion  
XX diseases such as Kuru, Creutzfeldt-Jakob disease, Gerstmann-Strausler-  
XX Scheinker Syndrome, prion associated human neurodegenerative diseases or  
XX animal prion diseases such as scrapie, spongiform encephalopathy,  
XX transmissible mink encephalopathy and chronic wasting disease of mule  
XX deer and elk.

PT Human apoptosis associated protein Bdk - useful to treat  
PT degenerative disorders characterised by inappropriate cell death or  
PT proliferation  
XX  
PS Example 8; Fig 9B; 110pp; English.  
PS  
XX This peptide comprises alanine scanning mutant PM-LVLEE of the BH3  
XX domain (see AAW38346) of human Bdk (see AAW38358), a novel apoptosis  
XX associated protein that can induce apoptosis in cells. PM-LVLEE  
XX contains 5 alanine substitutions in the BH3 element. It has  
XX completely lost BH3's apoptosis induction capabilities, supporting  
XX the conclusion that the BH3 region is absolutely necessary for  
XX Bdk's apoptotic function. Bdk and its BH3 domain can be used to  
XX treat degenerative disorders characterised by inappropriate cell  
XX death or proliferation.

XX  
CC The present invention describes synthetic peptides having an amino acid  
CC sequence comprising at least 3 residues selected from the group of amino

CC acids consisting of aromatic acids, negatively charged amino acids,  
CC positively charged amino acids, and aliphatic amino acids, the synthetic  
CC peptides being at least 7 amino acid residues in length and capable of  
CC binding to a major histocompatibility complex (MHC) class II protein  
CC associated with an autoimmune disease. The synthetic peptides have  
CC anti-inflammatory and anti-arthritic activities. They are used to treat  
CC inflammatory and demyelinating autoimmune diseases, especially  
CC rheumatoid arthritis and multiple sclerosis. The peptides are specific  
CC for particular MHC class II alleles. Purified, short and synthetic  
CC peptides should have fewer side effects than mixtures of random  
CC peptides; may include many repeats of the active sequence and/or contain  
CC amino acid analogues that improve stability (or other desired features).  
CC AAY82021 to AAY82044 represent specifically claimed peptide sequences  
CC which can be used as part of the synthetic peptides of the present  
CC invention. AAY82045 to AAY82063 represent specifically claimed examples  
CC of the synthetic peptides from the present invention; and AAY82064 to  
CC AAY82080 represent other peptides used in the exemplification of the  
CC present invention.

PT	Detecting, preventing and treating sensitivity to cat protein allergen
PT	comprises combining a biological sample with a human T cell reactive
PT	feline protein and determining the extent of binding that occurs -
XX	
PS	Example 3; Column 34; 106pp; English.
CC	
CC	The present invention relates to the detection of sensitivity to a cat
CC	protein allergen by combining a blood sample from a subject with a
CC	peptide of human T cell reactive feline protein (hTRFP). This method
CC	and the hTRFP peptides are useful for diagnosing, preventing and
CC	treating cat allergies by reducing or abolishing an individual's
CC	allergic response to a cat allergen. DNA encoding the TRFP may be
CC	used as probes to locate equivalent sequences present in other species.
CC	These may further be used to study the mechanism of immunotherapy of
CC	cat allergy, and to design modified derivatives, analogues or
CC	functional equivalents useful in immunotherapy. The present
CC	sequence was used in the invention.

PT	New human T cell reactive feline protein useful for reducing or	
PT	abolishing individual's allergic response to cat allergen comprising	
PT	two different covalently linked peptide chains -	
XX		
PS	Example 4; Column 101-102; 106pp; English.	
XX		
CC	This invention describes a novel naturally occurring cat protein allergen	
CC	(I), human T cell reactive feline protein (TRFP), comprising two	
CC	different covalently linked peptide chains with a molecular weight of 20	
CC	KD, 40 KD or 130 KD under non-reducing conditions and 5 KD or 10-18 KD	
CC	under reducing conditions. The products of the invention have	
CC	antiallergic activity and act as human T cell stimulators. TRFP is useful	
CC	for reducing or preventing the adverse effects of cat allergens on cat	
CC	allergic individuals and in ex vivo diagnostic tests to determine which	
CC	peptides cause sensitivity so as to selectively use them to desensitize	
CC	a cat sensitive individual. Purified TRFP is also useful for studying	
CC	the mechanism of immunotherapy of cat allergy and to design modified	
CC	derivatives, analogs or functional equivalents that are more useful in	
CC	immunotherapy against cat allergy. DNA sequences encoding TRFP are	
CC	useful as probes to locate equivalent sequences present in other species	
CC	(goats, sheep, dogs, rabbits or horses) that may be useful in diagnostics	
CC	and/or therapeutics. Fully defined and characterized TRFP provides	
CC	complete and a very simple desensitization therapy. This sequence	
CC	represents a human T cell reactive feline protein (also known as Fel d 1)	
CC	derived peptide Fel 1 which is described in the method of the invention.

DR New human T cell reactive feline protein, useful for desensitizing cat
XX allergic individuals to cat allergens -
XX
PS Example 4; Column 35; 108bp; English.
XX
CC This sequence is a peptide derived from the human T cell reactive feline
CC protein (TRFP) of the invention. The protein is a cat protein allergen,
CC and was isolated from a vacuum bag extract obtained by affinity
CC purification of house dust collected from several homes with cats. TRFP
CC is composed of two covalently linked peptide chains, and is also referred
CC to as Fel d I. TRFP and its peptides are useful for reducing or
CC preventing the adverse effects that exposure to cat allergens normally
CC has on cat allergic individuals (i.e. to desensitize individuals to cat
CC allergens or block the effect of the allergens). TRFP is also used in
CC methods of diagnosing sensitivity to Felis domesticus in an individual.
CC DNA sequences encoding TRFP can be used as probes to locate equivalent
CC sequences present in other species, e.g. goat, sheep, horse, rabbit and
CC dog, that may be useful in diagnostic and/or therapeutic applications.

DR Peptides of human T cell reactive feline protein for treating
XX sensitivity to cat protein allergens comprise at least one T cell
PT epitope recognized by a T cell receptor specific for the human T cell
PT reactive feline protein -
XX
PS Example 4; Column 103-104; 105bp; English.
XX
CC This invention describes a novel peptide (I) of human T cell reactive
CC feline protein (hTRFP) having at least one T cell epitope recognized
CC by a T cell receptor specific for the human T cell reactive feline
CC protein, the peptide consisting of at least 7-30 amino acids, and having
CC an amino acid sequence derived from an amino acid sequence comprising 94,
CC 96, 97, 109, or 111 residues, given in the specification. The peptides
CC down regulate the immune response to the allergen. The peptides have
CC reduced immunoglobulin E binding and reduce T cell responsiveness. The
CC peptide (I) is useful in compositions for treating sensitivity to a cat
CC protein allergen in a subject. This sequence represents the human TRFP
CC derived peptide used in the method of the invention.

XX  
CC The sequence is that of the inhibitor region of an alkyl peptide amide.  
CC The region comprises a sequence of amino acids homologous to a binding  
CC domain of a first protein. The binding domain is capable of binding a  
CC second protein in the intracellular space of a living cell. Such a  
CC peptide may be used to inhibit binding of the first protein to the  
CC second protein especially when the second protein is protein kinase  
CC A and the first protein is a protein kinase binding domain of an  
CC anchor region. Such peptides are efficient delivery systems for  
CC introducing peptide moieties into the intracellular space of  
CC living cells, including sperm cells and HeLa cells. The motility  
CC of sperm cells can be inhibited after exposure to the alkyl peptide  
CC amide form of anchor inhibitor peptides. These amides can thus be  
CC used, e.g., as contraceptives.

PT Contraceptive composition containing fatty acid conjugate of peptide  
PT that inhibits protein kinase A binding to sperm A kinase anchoring  
PT proteins -  
XX  
PS Claim 3; Column 5; 12pp; English.  
XX  
CC The invention provides a contraceptive composition that comprises a  
CC conjugate of a synthetic peptide and a fatty acid, where the peptide  
CC comprises an amphipathic alpha-helix domain that binds to an RII subunit  
CC of protein kinase A (PKA) and competitively inhibits binding of PKA to  
CC sperm A kinase anchoring proteins. The composition and method are useful  
CC for contraception by inhibiting sperm motility. Sequences AAV56946-956  
CC represent synthetic peptides that bind to the RII subunit of PKA.

XX  
PS Claim 10; Page 29; 41pp; English.  
XX

CC AAW05812-W05819 represent antisense peptides of the invention. Antisense  
CC peptides are encoded by antisense DNA. The antisense peptides are the  
CC hydropathic complement of the peptides encoded by the sense DNA strand.  
CC Antisense peptides exert an antagonistic effect on target ligands by  
CC virtue of their ability to bind to the sense peptide sequences, and  
CC thereby competing with the normal binding ligands for the peptide. These  
CC sequences are antisense to a target polypeptide, and when bound to their  
CC targets, alter the biological activity of the target polypeptide or the  
CC activity of a target molecule containing the peptide. AAW05814-W05816  
CC are antisense to a sequence contained within tumour necrosis factor  
CC alpha (TNFalpha). These sequences are used to treat or prevent  
CC conditions mediated by cytokines, preferably cancer or inflammatory  
CC conditions, especially rheumatoid arthritis or septic shock.

XX
XX This invention describes a novel method for the regulated (inducible)
XX dimerisation or oligomerisation of intracellular proteins. Dimerisation
XX and oligomerisation of proteins are general biological control
XX mechanisms that contribute to the activation of cell membrane receptors,
XX transcription factors, vesicle fusion proteins and other classes of
XX intra- and extra-cellular proteins. The invention describes a method for
XX inducing the intracellular aggregation of the cytoplasmic tail of the
XX zeta chain of the T cell receptor (TCR)-CD3 complex leading to
XX signalling and transcription of a reporter gene, the homodimerisation of
XX the cytoplasmic tail of the Fas receptor leading to cell specific
XX apoptosis and the heterodimerisation of a DNA binding domain (Gal4) and
XX a transcription-activation domain (VP16) thereby leading to direct
XX transcription of a reporter gene. AAW92471-W92485 are murine signalling
XX chimeric protein fragments used to design the primers represented in
XX AAX02029-X02049.

WPI: 2000-375496/32.  
Regulating expression of targeted genes in cells, useful for regulated  
gene therapy, comprises treating cells with membrane permeable  
synthetic ligand which binds to the receptor domain to dimerize or  
oligomerize the proteins -  
Example 5; Fig 4; 92pp: English.  
The present invention describes a method for regulating expression of a  
target gene. The method comprises providing a muscle or liver cell  
containing nucleic acids (N1 and N2) encoding chimeric proteins (P1 and  
P2) with ligand-binding and transcriptional activation domains and  
exposing the cells to a ligand. The method is useful in the basic  
investigation of a variety of cellular processes and in regulating the  
synthesis of proteins of therapeutic or agricultural importance. The  
method is useful in exocytosis, where export of a protein rather than  
transcription is controlled by the ligand, as well as in the control of  
protein degradation or activation. The method and the modified cells are  
especially useful in gene therapy, e.g. in the treatment of cardiac  
patients or patients susceptible to stroke, reperfusion injury,  
autoimmune disease, chronic pain, osteoporosis, or gene therapies  
involving cells which may have to be destroyed (e.g. cancerous cells or  
modified cells that result in another pathogenic state), as well as in  
other applications where inducible transcription or translation is  
desired. The cells can also be used in vivo, to modify whole organisms,  
preferably animals, including humans. The method permits regulated gene  
therapy, therefore increasing the safety, expression level and overall  
efficacy. AA060476 to AA060521 and AB03564 to AB03581 represent  
sequences used in the exemplification of the present invention.

CC	The invention relates to chimeric proteins and small organic molecules		
CC	capable of binding to two or more chimeric protein molecules, thereby		
CC	oligomerising them. The chimeric proteins comprise one or more ligand-		
CC	-binding domains fused to one or more "action" domains which are		
CC	heterologous with respect to the ligand binding domain. The ligand-		
CC	-binding domain may, for example, be an FKBP protein, capable of binding		
CC	FK506-type ligands. Examples of action domains include Fas (which, when		
CC	cross-linked, triggers apoptosis); domains involved in intracellular		
CC	signalling such as the CD3 zeta subunit or the interleukin-2 receptor		
CC	(TcrC); DNA binding proteins such as GAL4 or HNF1; or a transcriptional		
CC	activator such as VP16. The chimeric protein may contain additional		
CC	domains such as intracellular targeting domains. Examples of the		
CC	chimeric proteins constructed include an immunophilin-Fas chimeric		
CC	protein; a chimeric murine signalling protein comprising an		
CC	interleukin-2 receptor moiety (TcrC), the transmembrane and cytoplasmic		
CC	domains of CD3 and human FKBP12; and a GAL4 DNA binding domain/FKBP		
CC	domain/leptote tag fusion protein. The chimeric proteins, genetic		
CC	constructs encoding the chimeric protein and vectors are useful for the		
CC	treatment of many conditions, e.g., cancer, infectious diseases,

domain/epitope tag fusion protein. The chimeric proteins, genetic constructs encoding the chimeric protein and vectors are useful for the treatment of many conditions, e.g., cancer, infectious diseases,

CC metabolic deficiencies, cardiovascular diseases, autoimmune diseases or  
CC endocrine abnormalities. The chimeric proteins encoded by the genetic  
CC constructs are useful for regulated production of a desired protein, and  
CC in gene therapy. They are also useful in conjunction with the expression  
CC of an exogenous protein, properly encoded for transport to a vesicle, or  
CC for an endocytotic endogenous protein to enhance export of the endogenous  
CC protein. The oligomerisation mechanism is useful for control of protein  
CC degradation or inactivation. Homologous recombination is useful to remove  
CC or inactivate endogenous transcriptional control sequences. Sequences  
CC AAAY90474-Y90501 represent peptides encoded by oligonucleotides which were  
CC used in the exemplifications and disclosure of the invention in the  
CC construction of genetic constructs encoding the chimeric proteins of the  
CC invention.
